

Drone /UAV/ /Unmanned Air Vehicle Program Administration Training

The ability to operate this equipment safely and set safety lines using these Unmanned Vehicles has been covered in the first two courses of our program. This provides knowledge and expertise on the maintenance of fleet operations in terms of maintenance and repair, software updates, hardware advances and the future of this technology.

Classroom and field training – 8 Hours

Topics covered include:

- Understanding risks specific to certain operations
- Understanding selection and management of drone/UAV fleet
- Federal regulations
- State local regulations
- Permitting process
- Notification requirements if any
- Maintenance and repair of components
- Bench testing systems
